

Student sick/exclusion/return algorithm: student develops NEW symptom NOT attributable to another cause/condition or identified as close contact
High-risk symptom: cough, shortness of breath, difficulty breathing, unexplained loss of, or decrease in, sense of smell or taste
Low-risk symptom: fever, or temperature $\geq 100.4F$, sore throat, muscle aches/pains, fatigue, headache, nasal congestion/runny nose, gastrointestinal symptoms such as nausea/vomiting/abdominal pain/diarrhea

Other possible scenarios:

- Student tests positive for COVID-19, for any reason not falling under algorithm above → exclude from school 10 days with return per the algorithm
- Nursing/designated staff may consider general complaints on a case-by-case basis (abdominal pain, fatigue, headache with no other symptoms).
- Nursing/designated staff may consider chronic or recurring medical conditions that present with symptoms above on a case-by-case basis
